## Back in 1982 ...

... scientists and engineers like **Teus Hagen, Jaap Akkerhuis** and **Daniel Karrenberg** started building grass roots computer networks that grew into the European internet, together with their friends from the **European UNIX user groups** (like **Peter Collinson** and **Keld Simonsen**).

This is the joint history of **NLnet** and the **EUnet**.

# **“From utopia to dystopia in just 29 [30] short years”**

“We demonstrated that the Web had failed instead of served humanity, as it was supposed to have done, and failed in many places. The increasing centralization of the Web ended up producing—with no deliberate action of the people who designed the platform—a large-scale emergent phenomenon which is anti-human.”

**Tim Berners-Lee**

TODAY WE CREATE THE  
**INTERNET**  
OF TOMORROW

## An internet of human values

Resilient. Transparent. Sustainable.

The overall mission of the Next Generation Internet initiative is to re-imagine and re-engineer the Internet for the next generations. We envision the information age will be an era that enables human potential and creativity at the largest possible scale – while dealing responsibly with our natural resources. In order to preserve and expand the European way of life, we shape a value-centric, human and inclusive Internet for all.

These ambitions need a solid foundation to build on. The Next Generation Internet must become actual reality in the Next Generation. Devices on its way to enhance and control our lives are embedded in concrete, circling in space and connecting our bodies. The Next Generation Internet has to be a network where companies or parts of the network go down by accident, the rest of us should be close to zero.

There is another important dimension to trust. In a **transparent** technological environment, policies structure how entire societies and companies structure their speech and private enterprise and much more. To avoid any bias or systematic abuse of global communication, rising above international politics and strengthening the health and autonomy of our markets.

The enduring success of the Internet lies in permission-free innovation, openness and interoperability. The Next Generation Internet is set up to create wider choice. It fosters diversity and decentralisation, and grows the potential for disruptive innovation. This extends far beyond the technical realm. The Next Generation Internet will achieve a **sustainably open** environment for our cultures and economies, celebrating our values and promoting creativity and well-being.

Let's re-invent Internet to reach the full human potential, for all generations.

## AN INTERNET OF HUMAN VALUES

The overall mission of the Next Generation Internet initiative is to re-imagine and re-engineer the Internet for the third millennium and beyond. We envision the information age will be an era that brings out the best in all of us. We want to enable human potential, mobility and creativity at the largest possible scale – while dealing responsibly with our natural resources. In order to preserve and expand the European way of life, we shape a value-centric, human and inclusive Internet for all.

### Resilient.

These important ambitions need a solid technological foundation to build on. The resilience of the Internet must become actual reality in the Next Generation. Devices on its way to enhance and control our lives are embedded in concrete, circling in space and connecting our bodies. The Next Generation Internet has to be a network where companies or parts of the network go down by accident, the rest of us should be close to zero.

### Trustworthy.

There is another important dimension to trust. In a transparent technological environment, policies structure how entire societies and companies structure their speech and private enterprise and much more. To avoid any bias or systematic abuse of global communication, rising above international politics and strengthening the health and autonomy of our markets.

Let's re-invent Internet to reach the full human potential, for all generations.

## Next Generation Internet 2025

A study prepared for the European Commission  
DG Communications Networks, Content & Technology by:

SMART 2014/2015, NCI-FINE, (IAR, v0.75)

In 2016 the **European Commission** took up the idea for the **Next Generation Internet** initiative:

“The overall mission of the Next Generation Internet initiative is to re-imagine and re-engineer the Internet for the third millennium and beyond. **We envision the information age will be an era that brings out the best in all of us.** We want to enable human potential and creativity at the largest possible scale. In order to preserve and expand the European way of life, we shape a value-centric, human and inclusive Internet for all.”

# NGI is a moonshot ++ effort

- The internet is the **largest** and **most pervasive** technical construct ever made by humans
- And we need to change it with 3.8+ billion people 'on board'.
- High political stakes. High economic stakes. Highly critical users users. Overloaded with expectations. From everybody.
- Work consistent and forward-thinking. No time to lose.

# The vision: Preamble

“The overall mission of the Next Generation Internet initiative is to re-imagine and re-engineer the Internet for the third millennium and beyond. **We envision the information age will be an era that brings out the best in all of us.** We want to enable human potential and creativity at the largest possible scale. In order to preserve and expand the European way of life, we shape a value-centric, human and inclusive Internet for all.”

**An internet of human values**  
Resilient. Transparent. Sustainable.

The overall mission of the Next Generation Internet initiative is to re-imagine and re-engineer the Internet for the next generations third millennium and beyond. We envision the information age will be an era that brings out the best in all of us. We want to enable human potential and creativity at the largest possible scale. In order to preserve and expand the European way of life, we shape a value-centric, human and inclusive Internet for all.

These ambitions need a solid foundation to build on. The legendary robustness of the Internet must become actual reality in the Next Generation Internet. A massive global fleet of connected devices is on its way to enhance and control our homes, factories, offices and vehicles. Technology is embedded in concrete, cycling in space and is increasingly entering the intimacy of our human bodies. The Next Generation Internet has to be highly adaptive and **resilient**. Whatever companies or parts of the network go down by some natural or other disaster, the effects on the rest of us should be close to zero.

There is another important dimension to trust, which lies above physical availability. We need a **transparent** technological environment, that is trustworthy. The architecture, governance and policies structure how entire societies and economies interact. By design it should protect free speech and private enterprise and much more. The Next Generation Internet is to be designed to avoid any bias or systematic abuse of global trust in the Internet. It shall be a true global commons, rising above international politics and competition. It will guarantee the safety of citizens and strengthen the health and autonomy of our markets and societies.

The enduring success of the Internet lies in permission-free innovation, openness and interoperability. The Next Generation Internet is set up to create wider choice. It fosters diversity and decentralisation, and grows the potential for disruptive innovation. This extends far beyond the technical realm. The Next Generation Internet will achieve a **sustainably open** environment for our cultures and economies, celebrating our values and promoting creativity and well-being.

Let's re-invent Internet to reach the full human potential, for all generations.

# First goal: resilience

“These ambitions need a solid foundation to build on. The legendary robustness of the Internet must become actual reality in the Next Generation Internet. A massive global fleet of connected devices is on its way to enhance and control our homes, factories, offices and vehicles. Technology is embedded in concrete, circling in space and is increasingly entering the intimacy of our human bodies. The Next Generation Internet has to be **highly adaptive** and **resilient**. Whatever companies or parts of the network go down by some natural or other disaster, the effects on the rest of us should be close to zero. “

## An internet of human values Resilient. Transparent. Sustainable.

The overall mission of the Next Generation Internet initiative is to re-imagine and re-engineer the Internet for the next generations third millennium and beyond. We envision the information age will be an era that brings out the best in all of us. We want to enable human potential and creativity at the largest possible scale. In order to preserve and expand the European way of life, we shape a value-centric, human and inclusive Internet for all.

These ambitions need a solid foundation to build on. The legendary robustness of the Internet must become actual reality in the Next Generation Internet. A massive global fleet of connected devices is on its way to enhance and control our homes, factories, offices and vehicles. Technology is embedded in concrete, circling in space and is increasingly entering the intimacy of our human bodies. The Next Generation Internet has to be highly adaptive and **resilient**. Whatever companies or parts of the network go down by some natural or other disaster, the effects on the rest of us should be close to zero.

There is another important dimension to trust, which lies above physical availability. We need a **transparent** technological environment, that is trustworthy. The architecture, governance and policies structure how entire societies and economies interact. By design it should protect free speech and private enterprise and much more. The Next Generation Internet is to be designed to avoid any bias or systematic abuse of global trust in the Internet. It shall be a true global commons, rising above international politics and competition. It will guarantee the safety of citizens and strengthen the health and autonomy of our markets and societies.

The enduring success of the Internet lies in permission-free innovation, openness and interoperability. The Next Generation Internet is set up to create wider choice. It fosters diversity and decentralisation, and grows the potential for disruptive innovation. This extends far beyond the technical realm. The Next Generation Internet will achieve a **sustainably open** environment for our cultures and economies, celebrating our values and promoting creativity and well-being.

Let's re-invent Internet to reach the full human potential, for all generations.

# Second goal: Transparency and trustworthiness

There is another important dimension to trust, which lies above physical availability. We need a **transparent technological environment**, that is **trustworthy**. The architecture, governance and policies structure how entire societies and economies interact. By design it should protect free speech and private enterprise and much more. The Next Generation Internet is to be designed to avoid any **bias or systematic abuse of global trust** in the Internet. It shall be a true global commons, rising above international politics and competition. It will guarantee the **safety of citizens** and strengthen the **health and autonomy** of our **markets and societies**.

## An internet of human values Resilient. Transparent. Sustainable.

The overall mission of the Next Generation Internet initiative is to re-imagine and re-engineer the Internet for the next generations third millennium and beyond. We envision the information age will be an era that brings out the best in all of us. We want to enable human potential and creativity at the largest possible scale. In order to preserve and expand the European way of life, we shape a value-centric, human and inclusive Internet for all.

These ambitions need a solid foundation to build on. The legendary robustness of the Internet must become actual reality in the Next Generation Internet. A massive global fleet of connected devices is on its way to enhance and control our homes, factories, offices and vehicles. Technology is embedded in concrete, cycling in space and is increasingly entering the intimacy of our human bodies. The Next Generation Internet has to be highly adaptive and **resilient**. Whatever companies or parts of the network go down by some natural or other disaster, the effects on the rest of us should be close to zero.

There is another important dimension to trust, which lies above physical availability. We need a **transparent** technological environment, that is trustworthy. The architecture, governance and policies structure how entire societies and economies interact. By design it should protect free speech and private enterprise and much more. The Next Generation Internet is to be designed to avoid any bias or systematic abuse of global trust in the Internet. It shall be a true global commons, rising above international politics and competition. It will guarantee the safety of citizens and strengthen the health and autonomy of our markets and societies.

The enduring success of the Internet lies in permission-free innovation, openness and interoperability. The Next Generation Internet is set up to create wider choice. Let's re-invent Internet to reach the full human potential, for all generations.

**Z E R O**

# What we wanted to achieve

Design a light-weight and confidential application procedure providing adequate insight into technical capabilities as well as the urgency, relevance and relative cost effectiveness of the projects proposed at a low cost to the **applicants**.

# Low barrier to entry

- .. we use a **staged approach** which identifies and amends missing or inadequate aspects of the proposals prior (and conditional) to the start of a project.
- ... and **guide** and **support** projects with essential QA and strategic aspects that require additional expertise

5.6 million euro  
in small grants  
until 2021

**47 active projects  
already running**

**> 90% new to  
H2020**

**1.6M€ allocated  
so far**

Competitive calls every  
**two months** until the  
budget is allocated.

Projects between 5k-50k  
Follow-up possible

**Walk the talk:**

Inclusion

Security

Localisation

Open Standards

Free & Open Source

Deliver to deploy

## **Key characteristics**

5.6 million euro  
in small grants  
until 2021

**82 active projects  
already running**

**> 90% new to  
H2020**

**2.8M€ allocated  
so far**

## Betrusted software and BetrustedOS

Betrusted is a **cryptoprocessor** with a dedicated display and keyboard. It's a protected place for your private matters.

<https://betrusted.io/>

## A proof of concept of identity-based encryption

<https://nlnet.nl/project/IBE/>  
<https://privacybydesign.foundation/en>

Extend the existing attribute-based identity platform IRMA with **easy-to-use encryption**. The kind of encryption is called Identity-Based. Its main advantage is that key management is simple, so that encryption becomes easy to use, via a plugin to an email client (only Thunderbird in this proof of concept project).

## Sonar

<https://nlnet.nl/project/Sonar/>  
<https://arso.xyz/sonar>

Sonar is a **p2p database and search engine** running on top of the dat stack. The search index is created with **sonar-tantivy**, specialized javascript bindings to **tantivy** – a search engine library written in Rust.

## Wireguard Rust Implementation

<https://nlnet.nl/project/Wireguard-Rust/>

A fast and modern VPN that utilizes state-of-the-art cryptography

*Oxidize!*

# More Rust projects

## Noise Explorer-VerifPal

**Nadim Kobeissi**

Noise Explorer is a framework for designing, formally verifying and generating secure implementation code for arbitrary secure channel protocols based on the Noise Protocol Framework.

## Opaque Sphinx Server and Clients

Stefan Marsiske

password storage, has Rust bindings

# Support different layers

## **End user applications**

- Searx, Plaudit, Blink RELOAD, Sonar, El Repo, Transparency Toolkit, Nextcloud

## **Technical building blocks**

- GNU Name System, Software Vulnerability Discovery, IPFS Search, DID Resolver/Registrar,

## **Community infrastructure**

- StreetComplete, Fediverse.Space, SCION Geotagging, DeltaBot,
- In Common, SCION-SWARM, Fediverse Space

## **Explorative search and discovery**

- Neuropil, librarian
